

AQB-B6-CT

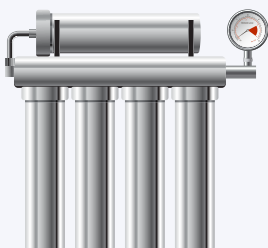

COUNTERTOP

CHILLED & SPARKLING DISPENSER

- polished stainless steel finish
- Adjustable water outlet volume
- 1/6 hp compressor
- Space saving small profile
- Environmentally friendly

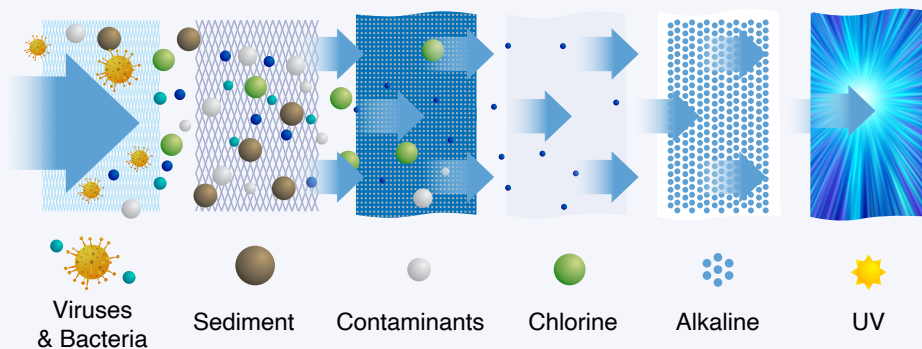

Fresh mineralized alkaline water with

under-counter 5-stage reverse osmosis system plus UV

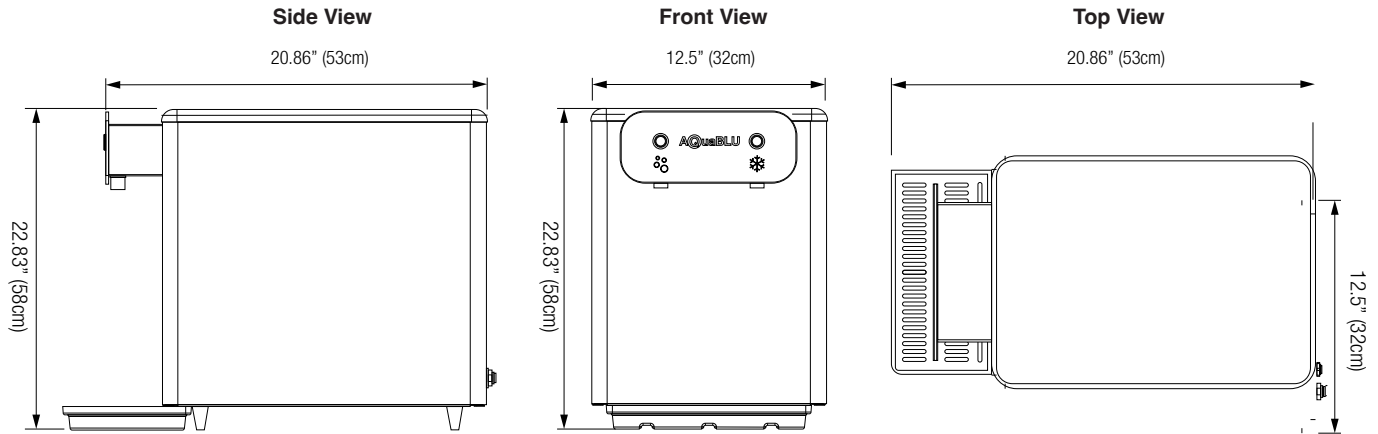

- 1 The initial step involves the use of an ultra-fine membrane filter, ensuring the removal of harmful bacteria, viruses, and other contaminants through hydrostatic pressure.
 - 2 Then a sediment filter does the removal of particles, such as rust, among other metal and non-metal fragments in the water.
 - 3 The subsequent stage introduces an active-carbon filter to eliminates particles and organisms larger than 0.5 micron.
 - 4 A post-activated carbon filter will later take care of Chlorine, Total Organic Carbon (TOC), Pharmaceuticals, Turbidity, Volatile Organic Chemicals (VOC), Industrial Solvents, and Chemicals.
 - 5 The last filtering step consist of an alkaline balance filter to enhance quality and taste with essential mineralization of the water.
- + As a final touch a UV light will be activated to provide disinfection during the process of dispensing in the recipient.

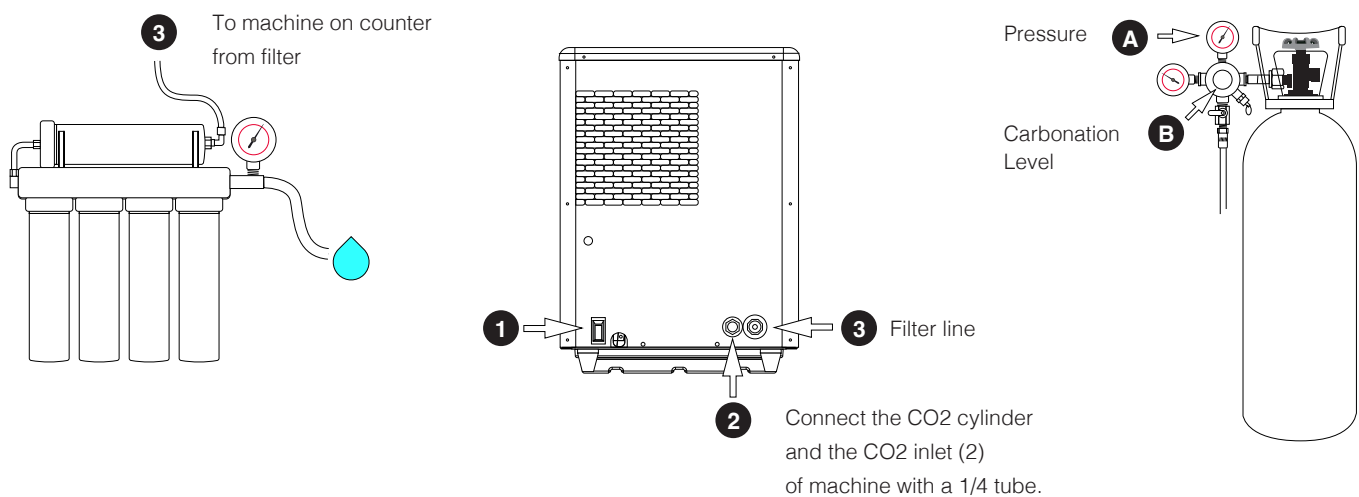

Unfiltered Water In → Purified, Filtered Water Out

AQB-B6-CT

Flow:	2-2.5L/Min	Ice Bank:	6.5kg
Voltage:	110-120V	Inlet Water Pressure:	1-3.5 Bar
Power:	200W	Inlet Co2 Pressure:	60-65PSI
Chill Capacity:	45L/H	Product Size:	D53*W32*H45CM
Compressor:	1/6HP	Packing Dimension:	D64*W37*H58CM
Carbonator:	1.8L	Weight:	70.54 lbs (32 kg)
Refrigeration Gas:	R134a/R290	1L Filling Time:	15 Seconds

Note: It is recommended to have the following clearance around and above this unit: 6" side, 2" back, 6" top
